Food Safety, Quality, and Environment

ASEPT International AB manufactures and markets safe, high-quality products that offer customers added value in terms of quality, hygiene, and productivity. We achieve this through structured processes in compliance with FSSC 22000, ISO 9001, and ISO 14001 standards, as well as with our staff committed to ongoing improvement. These efforts are pivotal in creating the necessary conditions for both our company and our customers' long-term development.

ASEPT strives to ensure the highest standards in health and food safety, product quality, and our environment. Our products always meet applicable legislation and our customers' requirements for food safety, quality, and environmental performance. Our dedication to improving our management systems is an ongoing, long-term effort. We ensure a culture of continuous improvement through staff education. Every employee actively contributes to our continuous improvement work in food safety, quality, and environmental practices.

ASEPT continuously works to prevent pollution and improve our environmental performance. One of our goals is to reduce our resource consumption per produced product, with the requirement that all energy used must meet Ecolabel standards. Additionally, we are dedicated to reducing emissions from all types of transportation. Food safety and environmental impact are fundamental criteria in all our purchases and procurements, enabling us to reduce the environmental impact within our supply chain. Furthermore, we proactively address the prevention of emergency situations, such as fire.

ASEPT is dedicated to open and transparent communication regarding all matters related to food safety, quality, and the environment, both internally and externally, with suppliers, customers, and other stakeholders.

ASEPT International AB | Lund, Sweden.
